## DETAILED ACTION

### *Claim Rejections - 35 USC § 112*

1. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

2. Claims 1, 10, 11 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention. Page 8 of the specification describes depositing approximately about 20 angstroms but not “depositing no more than about 20 angstroms of the liner layer.” Applicant has not shown where in the specification teaching of “forming an isotropic plasma of hydrogen and nitrogen using a plasma source disposed upstream from the deposition reactor and flowing the isotropic plasma into the deposition chamber.”

3. Claims 1, 10, 11 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

It is unclear by “using a plasma source disposed upstream from the deposition chamber.” The plasma source is the gases or the power source that creates plasma? And what is its location from the deposition chamber?

The limitation “repeating...until the liner layer is formed to a desired thickness” is vague because the specification doesn’t define what the desired thickness is.

*Allowable Subject Matter*

4. Claims 1, 10, 11 would be allowable if rewritten to overcome the rejection(s) under 35 U.S.C. 112, second paragraph, set forth in this Office action and to include all of the limitations of the base claim and any intervening claims.

Claims 1, 10, 11 are allowable because applied prior art doesn't describe the step repeating (depositing the TiN liner layer, forming the isotropic plasma of hydrogen and nitrogen, flowing the plasma into the deposition chamber, exposing the TiN liner layer to the isotropic plasma thereby densifying the TiN liner layer, including sidewalls of the TiN liner layer) until the liner layer is formed to a desired thickness.

*Drawings*

5. The drawings are objected to under 37 CFR 1.83(a) because they fail to show reference # 46 as described in page 7, line 16-26 of the specification. Any structural detail that is essential for a proper understanding of the disclosed invention should be shown in the drawing. MPEP § 608.02(d). A proposed drawing correction or corrected drawings are required in reply to the Office action to avoid abandonment of the application. The objection to the drawings will not be held in abeyance.
